\*1 Only the sizes of the special-marked columns are stamped on the tools.  
 \*2 W=Old Whitworth Standard. Instead of BSW and BSF tools are stamped with BS.  
 \*3 Regular square only.  
 4 (...) = Sizes not mentioned in the Standards  
 5 Tabulation in conformity with German DIN, American Standard and British Standard

**SAFETY RULES FOR HAND TOOLS**

Always use the right size and type of tool for the job being done. Keep tools in proper working condition. Never alter a tool from its original condition.

Protect your eyes. Always wear safety goggles when using tools; particularly when using punches chisels hammers, attachments and cutting tools.

Ordinary plastic dipped handles are designed for comfort-not electrical insulation. Never use a tool as a hammer unless manufactured for that purpose.

When possible, always pull on a wrench handle rather than push and adjust your distance to prevent a fall.

Never use a pipe extension or other form of "cheater" to increase the leverage of any wrench. Never use a hammer on any wrench, other than a striking face wrench that is designed to be struck.

Adjustable wrenches should be tightly adjusted to the nut and pulled so that the force is on the side of the fixed jaw.

Never use a pipe wrench to bend, raise or lift a pipe.

Never use hand sockets or attachments on electric or air powered driving tools.

Select a wrench or socket whose opening exactly fits the nut. Always seat the wrench or socket straight on the nut-do not cock the tool when turning.

Ratchet mechanisms should be cleaned and lubricated periodically with light grade oil.

Pliers should not be used for cutting hardened wire unless manufactured for that purpose. Always cut at right angles - don't rock from side to side when cutting.

Always strike squarely with the hammer striking face parallel to the surface being struck. Avoid glancing blows and over and under strikes. Never strike on object with the side of a hammer. Do not strike on hammer with another hammer.

Keep hammer heads tight on the handle. Never use a hammer with a loose or damaged handle.

Metal cutting chisels are intended for cutting, shaping and removing metal softer than the cutting edge itself. Never use these tools for cutting or splitting stone or concrete.

Always strike the struck base of a chisel or punch squarely. The striking face of the hammer should have a diameter approximately 10 mm larger than the struck face of the punch or chisel.

Use the right type of screw driver with the right tip for the screw. Make sure the tip fits the screw slot, not too loose and not too tight.

Never use screw drivers with rounded tips.

Never use a screw driver as a chisel, punch, scraper or pry bar. Use screw drivers for screw driving only.

Do not use screw drivers with split or broken handles.

JHALANI FORGE Pvt. Ltd. and its associates cannot be held responsible for injury or damage by tools improperly used or from tools which have been abused or badly worn.

**\* FULL UNCONDITIONAL DURATION WARRANTY**

If the item is found to have any latent manufacturing defect, please return it to any of our factories sales depot, or authorised dealer for a free replacement.

**IMPORTANT NOTE TO STOCKISTS AND DEALERS**

The Stockists and Dealers should ensure proper compliance of the Standards of Weights and Measures Act and Packaging Commodities Rules. If any deficiency is noticed in any packaging, the same should be got rectified before putting for sale.
